EDUCATION

MURANG'A UNIVERSITY OF
TECHNOLOGY

- Bsc Software Engineering
- 2016 - 2022

St. JOSEPH'S HIGH
SCHOOL

- B +
- 2012 - 2015

SKILLS

- JavaScript
- React
- Redux
- TailwindCSS
- MaterialUI
- HTML
- CSS

EXPERIENCE

FARMERS' CHOICE LTD

Information Technology Intern

- Python
- 2020 FEB - 2020 MAY

MWANGI MORRIS

SOFTWARE ENGINEER

PROFILE

I am a software engineer with a specialization in frontend web development. I build elegant and highly interactive user interfaces, which are responsive and accessible, using state-of-the art libraries and frameworks. I have a good eye for detail, ensuring I only produce high quality work, both for users as well as other developers. I treasure working on projects.

PROJECTS

Weather App

React, TailwindCSS, MaterialUI & APIs

- Want to know the weather data of virtually any city on earth? I worked with two APIs to enable just that. Forecast data is presented elegantly, something that's not common in many weather apps out there. Have a look: https://devmwas.github.io/weather_app/

Calculator App

React, TailwindCSS, Redux, & MaterialUI

- This application handles the basic arithmetic calculations. A calculator is one of the most interactive applications out there because it's made up of just buttons. I had a great opportunity to learn state management with Redux while building this app. Check it out: https://devmwas.github.io/calculator_app/

Todos App

React, TailwindCSS & MaterialUI

- This application helps you to track your chores or tasks in a neat way. You can add and remove your todos. It was a great experience to learn about the CRUD pattern in React. Check it out: <https://devmwas.github.io/todos/>
